

Hello,

My name is Phil Barbato. I have been building websites for the better part of twenty years.

I spent my early years creating interesting problems for myself and coding my way around them. I taught myself Flash programming and animation, then wrote a CMS in ASP and MySQL from scratch when I didn't know better. I coded myself into corners, then built the windows to climb out.

Since then I've learned to write good code to achieve amazing outcomes. I have mastered the art of transforming flat designs into beautiful, simple, and semantic HTML, CSS, and JavaScript. I built websites on CMSs including WordPress, Expressionengine, and Statamic. I trained coworkers on the best practices of web design and development, built a custom website framework and preprocessing system, and led a team of developers to success.

I love translating technical concepts for clients and coworkers. I'm at home in front of a whiteboard. I am a wizard with a metaphor. I thrive when working with my clients and my team to discover (or create!) problems and solve them.

I am looking for a career where I can use my skills and experience to learn, grow, and lead. I want to be part of a mission-driven organization. I am ready for a big step, not an easy one. I want to make a positive impact in the world and not just fill out a timesheet.
